drawn by a machine from a single number

COLOPHON

Every plate in this book was computed, not drawn. A single integer is expanded into a height field by fractal noise; water is routed downhill across that field; valleys are cut along the drainage; climate is derived from latitude and altitude; provinces are grown from watersheds; and the names are coined from a phonology invented for each province.

The same integer always produces the same country. There is no other copy of it anywhere, and no one has been there.

Composed with Pillow and numpy. Set in Garamond and Book Antiqua.
